OM nucleic - nucleic search, using sw model

Run on: April 11, 2006, 18:10:11 ; Search time 23.1356 Seconds  
(Without alignments)  
4379.433 Million cell updates/sec

Title: US-10-712-654-21

Perfect score: 57  
Sequence: 1 gbgctgactacgtcctca.....aatccctgattcattagagg 57

Scoring table: OLIGO\_NUC  
Gapop 60.0 , Gapext 60.0

Searched: 1303057 seqs, 888780828 residues

Word size : 1

Total number of hits satisfying chosen parameters: 2605320

Minimum DB seq length: 0

Maximum DB seq length: 200000000

Post-processing: Listing first 1000 summaries

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

#### SUMMARIES

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

PS Claim 1; SEQ ID NO 21; 61bp; English.
XX

```

```

CC The present invention relates to an oligonucleotide of 20-40 nucleotides
CC that specifically hybridizes to a sequence contained in a Bacillus
CC anthracis target sequence. The methods and compositions of the present
CC invention are useful for detecting the presence of Bacillus anthracis
CC nucleic acid in a sample, in particular for detecting cutaneous and
CC respiratory anthrax infections. Two synthetic genetic target sequences,
CC derived from paga and capB gene sequences, were synthesized to provide
CC known standards for testing oligonucleotides for detection of the genes
CC carried by the plasmids pXO1 and pXO2, without requiring handling of
CC virulent Bacillus anthracis. The present sequence represents a paga
CC target sequence.

XX PT New oligonucleotides that hybridize specifically to a Bacillus anthracis  
XX PT sequence, useful for detecting cutaneous and respiratory Bacillus anthrax  
XX PT infections.  
XX  
XX PS Claim 21; SEQ ID NO 33; 61pp; English.  
XX  
XX CC The present invention relates to an oligonucleotide of 20-40 nucleotides  
XX CC that specifically hybridises to a sequence contained in a Bacillus  
XX CC anthracis target sequence. The methods and compositions of the present  
XX CC invention are useful for detecting the presence of Bacillus anthracis  
XX CC nucleic acid in a sample, in particular for detecting cutaneous and  
XX CC respiratory anthrax infections. Two synthetic genetic target sequences,  
XX CC derived from pagA and capB gene sequences, were synthesized to provide  
XX CC known standards for testing oligonucleotides for detection of the genes  
XX CC carried by the plasmids pX01 and pX02, without requiring handling of  
XX CC virulent Bacillus anthracis. The present sequence represents a pagA  
XX CC target sequence.

PT	New non-pathogenic spore comprising an antigenic fragment of anthrax protective antigen, useful as an anthrax vaccine or for manufacturing an anthrax vaccine.
PS	Claim 5; SEQ ID NO 10; 90pp; English.
XX	
CC	The present invention relates to a non-pathogenic spore comprising an antigenic fragment of anthrax protective antigen. Also given is a pharmaceutical composition comprising a non-pathogenic spore comprising at least an antigenic fragment of anthrax protective antigen in association with a pharmaceutical carrier and/or excipient; and methods of inducing immunity to anthrax in a mammal susceptible to anthrax infection. The Bacillus species spore is a spore from many species such as Bacillus alvei; Bacillus pasteurii; Bacillus brevis and preferably a spore from Bacillus subtilis. The spore comprises an antigenic fragment of anthrax protective antigen in the form of a protein attached to the proteinaceous coat of the spore. It comprises an antigenic fragment of anthrax protective antigen encoded in the form of DNA which is adapted to be expressed when the spore germinates. The antigenic fragment is one or more of: PA83 which comprises a sequence of SEQ ID NO: 6; PA63 which comprises a sequence of SEQ ID NO: 7; Domain 1 of the protective antigen which has a sequence of SEQ ID NO: 1; Domain 2 of the protective antigen which has a sequence of SEQ ID NO: 2; Domain 3 of the protective antigen which has a sequence of SEQ ID NO: 3; Domain 4 (residues 595-735) of the protective antigen which has a sequence of SEQ ID NO: 4; and Domain DIB23 which is a sequence of SEQ ID NO: 10. The composition further comprises an adjuvant that potentiates an antigen-specific immune response. The composition (including the spore) is useful as an anthrax vaccine or for manufacturing an anthrax vaccine. The composition and method are used for inducing an immune response against anthrax. The present sequence is DNA encoding anthrax protective antigen domain DIB23.

XX Recombinant DNA construct useful as vaccines for anthrax, in producing  
PT host cells for analyzing the drugs and agents inhibiting anthrax.  
XX  
XX Disclosure; Page 35; 35pp; English.  
XX  
XX The invention provides a recombinant DNA construct that comprises a  
CC vector and at least one nucleic acid (or its fragment) encoding a  
CC combination of Bacillus anthracis proteins, selected from protective  
CC antigen (PA), MAT-PA (PA with its secretory signals removed), TPA-PA (PA  
CC with its secretory signals replaced with those of tissue plasminogen  
CC activator) and PA63 (63 kDa PA). The construct is useful as a DNA vaccine  
CC for anthrax and in producing infectious alpha virus particles. These  
CC particles, expressing the B. anthracis proteins are useful also as  
CC vaccines for anthrax. Host cells transformed with the construct are  
CC useful for analyzing the effectiveness of drugs and agents that inhibit  
CC anthrax or B. anthracis proteins. The present sequence represents a B.  
CC anthracis PA63 protein encoding DNA

 XX New immunogenic reagent having a polypeptide of the full length  
 PT Protective Antigen of Bacillus anthracis, useful for treating B.  
 PT anthracis infection or in preparing a medicament for the prophylaxis or  
 PT treatment of the infection.  
 XX  
 PS Example 5; Fig 3; 40pp; English.  
 XX  
 XX The present invention relates to an immunogenic reagent, which produces  
 CC an immune response that is protective against Bacillus anthracis. The  
 CC reagent comprises one or more polypeptides which together represent up to  
 CC three domains of the full length Protective Antigen (PA) of Bacillus  
 CC anthracis or variants of these, and at least one of the domains comprises  
 CC domain 1 or domain 4 of PA or its variant. The invention is used as a  
 CC vaccine. The immunogenic reagent is useful in the preparation of a  
 CC medicament for the prophylaxis or treatment of B. anthracis infection.  
 CC The present sequence is Bacillus subtilis protective antigen domain

XX New B moiety of pore-forming binary A-B toxin or its fragment, where the  
PT moiety has a mutation that inhibits its pore-forming ability, useful for  
PT preventing or treating bacterial infection, e.g. anthrax.  
XX  
XX Disclosure; SEQ ID NO 22; 129pp; English.  
XX  
XX The invention relates to a B moiety of pore-forming binary A-B toxin or  
CC its fragment, where the moiety has a mutation that inhibits its pore-  
CC forming ability and is selected from S382, N399, and N422 of the Bacillus  
CC anthracis protective antigen (PA) appearing as ADM05483. Also included  
CC are a vaccine composition comprising the mutant B moiety or its fragment  
CC (and a carrier), preventing or treating a bacterial infection in a mammal  
CC by administering the vaccine to the mammal, a nucleic acid encoding the  
CC mutant B moiety, a vector comprising the nucleic acid and a purified  
CC antibody that specifically binds a B moiety, but fails to bind a  
CC naturally occurring B moiety. The B moiety is selected from Clostridium  
CC difficile, C. perfringens, C. spiroforme, C. botulinum, and Bacillus  
CC cereus. The mutation inhibits the pore-forming ability of the toxin in  
CC vivo. The B moiety and vaccine composition are useful for preventing or  
CC treating a bacterial infection, e.g. anthrax. The present sequence  
CC encodes the wild-type PA protein.

XX New non-pathogenic spore comprising an antigenic fragment of anthrax  
PT protective antigen, useful as an anthrax vaccine or for manufacturing an  
PT anthrax vaccine.  
XX  
XX Disclosure; SEQ ID NO 17; 90pp; English.  
XX  
XX  
XX The present invention relates to a non-pathogenic spore comprising an  
CC antigenic fragment of anthrax protective antigen. Also given is a  
CC pharmaceutical composition comprising a non-pathogenic spore comprising  
CC at least an antigenic fragment of anthrax protective antigen in  
CC association with a pharmaceutical carrier and/or excipient; and methods  
CC of inducing immunity to anthrax in a mammal susceptible to anthrax  
CC infection. The Bacillus species spore is a spore from many species such  
CC as Bacillus alvei; Bacillus badus; Bacillus brevis and preferably a  
CC spore from Bacillus subtilis. The spore comprises an antigenic fragment  
CC of anthrax protective antigen in the form of a protein attached to the  
CC proteinaceous coat of the spore. It comprises an antigenic fragment of  
CC anthrax protective antigen encoded in the form of DNA which is adapted to  
CC be expressed when the spore germinates. The antigenic fragment is one or  
CC more of: PA83 which comprises a sequence of SEQ ID NO: 6; PA63 which  
CC comprises a sequence of SEQ ID NO: 7; Domain 1 of the protective antigen  
CC which has a sequence of SEQ ID NO: 1; Domain 2 of the protective antigen  
CC which has a sequence of SEQ ID NO: 2; Domain 3 of the protective antigen  
CC which has a sequence of SEQ ID NO: 3; Domain 4 (residues 595-735) of the  
CC protective antigen which has a sequence of SEQ ID NO: 4; and Domain 1b23  
CC which is a sequence of SEQ ID NO: 10. The composition further comprises  
CC an adjuvant that potentiates an antigen-specific immune response. The  
CC composition (including the spore) is useful as an anthrax vaccine or for  
CC manufacturing an anthrax vaccine. The composition and method are used for  
CC inducing an immune response against anthrax. The present sequence is DNA  
CC encoding anthrax protective antigen, PA83.

XX New attenuated bacterium capable of expressing a heterologous protein,  
XX which is under the control of a promoter, useful as a vaccine against  
XX Bacillus anthracis infection, or for treating Bacillus anthracis  
XX infection.  
XX Claim 10; SEQ ID NO 9; 83pp; English.  
XX The invention provides an attenuated bacterium which is capable of  
XX expressing a heterologous protein. The expression of the heterologous  
XX protein is under the control of a promoter selected from 8 fully defined  
XX sequences ADY84827-ADY84834. The attenuated bacterium is preferably  
XX Salmonella typhi or Salmonella typhimurium. The heterologous protein  
XX comprises an antigenic sequence derived from a virus, bacterium, fungus,  
XX yeast or parasite, and is especially a protective antigen (PA) of  
XX Bacillus anthracis. A claimed live attenuated vaccine for immunization  
XX against anthrax comprises an attenuated galactose epimerase-less mutant  
XX strain of S. typhi (e.g. strain Ty21a) carrying a Bacillus anthracis PA,  
XX especially a wild-type PA or its immunogenic fragment. The PA is  
XX preferably encoded by a low-copy plasmid such as pG82. The plasmid  
XX promotes expression of the PA by a n1rb promoter or by a Sec signal  
XX sequence. The vaccine is used in a claimed method of immunizing a  
XX susceptible host against B. anthracis disease. The present sequence is  
XX the B. anthracis PA coding sequence (wild-type).

PT New non-pathogenic spore comprising an antigenic fragment of anthrax protective antigen, useful as an anthrax vaccine or for manufacturing an anthrax vaccine.

PS Claim 5; SEQ ID NO 16; 90pp; English.

CC The present invention relates to a non-pathogenic spore comprising an antigenic fragment of anthrax protective antigen. Also given is a pharmaceutical composition comprising a non-pathogenic spore comprising at least an antigenic fragment of anthrax protective antigen in association with a pharmaceutical carrier and/or excipient; and methods of inducing immunity to anthrax in a mammal susceptible to anthrax infection. The Bacillus species spore is a spore from many species such as Bacillus alvei; Bacillus badu; Bacillus brevis and preferably a spore from Bacillus subtilis. The spore comprises an antigenic fragment of anthrax protective antigen in the form of a protein attached to the proteinaceous coat of the spore. It comprises an antigenic fragment of anthrax protective antigen encoded in the form of DNA which is adapted to be expressed when the spore germinates. The antigenic fragment is one or more of: PA83 which comprises a sequence of SEQ ID NO: 6; PA63 which comprises a sequence of SEQ ID NO: 7; Domain 1 of the protective antigen which has a sequence of SEQ ID NO: 1; Domain 2 of the protective antigen which has a sequence of SEQ ID NO: 2; Domain 3 of the protective antigen which has a sequence of SEQ ID NO: 3; Domain 4 (residues 595-735) of the protective antigen which has a sequence of SEQ ID NO: 4; and Domain D1B23 which is a sequence of SEQ ID NO: 10. The composition further comprises an adjuvant that potentiates an antigen-specific immune response. The composition (including the spore) is useful as an anthrax vaccine or for manufacturing an anthrax vaccine. The composition and method are used for inducing an immune response against anthrax. The present sequence is DNA encoding full length anthrax protective antigen, PA83.

PT New polynucleotide vaccine composition comprising a nucleic acid sequence that encodes a Bacillus anthracis antigen, useful for eliciting a protective immune response against Bacillus anthracis.

PS Example 1; SEQ ID NO 3; 65pp; English.

CC The present invention relates to a new polynucleotide vaccine composition comprising a nucleic acid sequence that encodes a Bacillus anthracis antigen and that is operatively linked to a promoter suitable for expression of the antigen in a mammalian cell. The polynucleotide vaccine composition is useful for eliciting a protective immune response against Bacillus anthracis. The present sequence represents Bacillus anthracis PA antigen encoding sequence.

XX
XX New polynucleotide vaccine composition comprising a nucleic acid sequence
XX that encodes a Bacillus anthracis antigen, useful for eliciting an immune
XX response against B. anthracis in a subject.
XX
XX Example 1; SEQ ID NO 3; 40pp; English.
XX
XX The invention relates to a polynucleotide vaccine composition comprising
XX a Bacillus anthracis antigen-encoding nucleic acid which is operatively
XX linked to a promoter for expression of the antigen in a mammalian cell.
XX The invention also relates to use of the vaccine composition of the
XX invention for eliciting an immune response in an individual. Preferably,
XX the antigen encoded by the polynucleotide vaccine is obtained or derived
XX from the Bacillus anthracis Protective Antigen (PA), a non-toxic factor
XX responsible for binding to cell membranes which is known to confer active
XX protection against anthrax. The encoded Bacillus anthracis antigen may
XX also be linked to a leader signal peptide (such as the tissue plasminogen
XX activator (TPA) signal peptide) which permits its secretion. The vaccine
XX composition may additionally comprise an adjuvant component such as a CpG
XX sequence, a nucleic acid encoding a polypeptide adjuvant, a lipid, a non-
XX protein hormone or a vitamin. The polynucleotide vaccine composition of
XX the invention can be administered directly into skin or muscle tissue,
XX preferably in particulate form, and is useful for inducing a protective
XX immune response against Bacillus anthracis infection. The present
XX sequence represents the complete nucleotide sequence encoding the
XX Bacillus anthracis Protective Antigen, used in the construction of a
XX Bacillus anthracis polynucleotide vaccine in an example of the invention.

XX Nucleic acid encoding anthrax toxin fusion protein - useful for  
PT targeting toxin to specific cells, eg for killing tumour cells or HIV-  
PT infected cells.  
XX  
XX Example 6; Page 111-113; 124pp; English.  
XX  
CC The sequence encoding the protective antigen of *Bacillus anthracis* may be  
CC used in the construction of a nucleic acid which encodes a fusion protein  
CC comprising the anthrax protective antigen binding domain of the native  
CC anthrax lethal factor and a sequence encoding an actively inducing domain  
CC of a second protein. Such fusion proteins are useful for the specific  
CC killing of tumour cells or the killing of cells infected with

CC intracellular pathogens, especially HIV, depending on the second  
CC component. The protective antigen and other toxins require proteolytic  
CC cleavage to acquire activity. Since some cells infected with an  
CC intracellular pathogen possess an active protease with quite a narrow  
CC substrate specificity e.g. HIV, the protease cleavage site found in the  
CC native toxin is replaced with an intracellular pathogen specific protease  
CC site (See AAR60184-88). The protease in cells that are infected with an  
CC intracellular pathogen cleaves the modified toxin which is then rendered  
CC active and kills the cell. This sequence encodes the *Bacillus anthracis*  
CC protective antigen but the nucleotide originally at positions 482-523  
CC have been replaced with the cassette described in AAQ70186, resulting in  
CC replacement in the corresponding protein of amino acids 162-171 with the  
CC HIV protease cleavable sequence described in AAR60186. (Updated on 25-MAR  
CC -2003 to correct PN field.)

NUMBER OF SEQ ID NOS: 34  
SEQ ID NO 7  
LENGTH: 8198  
TYPE: DNA  
ORGANISM: Bacillus anthracis  
FEATURE:

NAME/KEY:  
LOCATION:  
OTHER INFORMATION: Expression vector for B. anthracis Protective Antigen (PA). E  
OTHER INFORMATION: sequence is shown since the vector sequence is different from  
OTHER INFORMATION: of the pBP vectors. The PA coding sequence is from 3735 to 59.  
US-10-402-466A-7

Query Match 100.0%; Score 57; DB 7; Length 8198;

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

 /note="Vector: Ziplox; Site 1: Sal I; Site 2: Not I; mRNA  
 was prepared from endosperm tissues of the barley cultivar  
 Himalaya. cDNA was synthesised from pooled 10, 12, and 15  
 dpa endosperm using Not I-oligo(dT)18 primer/adaptor  
 (Pharmacia Biotech), and then ligated to the Sal I-Not I  
 site of Ziplox vector (Life Technology) after adding a  
 Sal I-Xho I adaptor (Stratagene). Constructed by Shahjahan  
 Ali and Bill Taylor."

TITLE Bacillus anthracis comparative genomics  
JOURNAL Unpublished  
REFERENCE 2 (bases 1 to 181677)  
AUTHORS Ravel,J., Raako,D.A., Shumway,M.F., Jiang,L., Cer,R.Z.,  
Federova,N.B., Salzman,S. and Fraser,C.M.  
TITLE Direct Submission  
JOURNAL Submitted (17-MAY-2004) The Institute for Genomic Research, 9712  
Medical Center Dr., Rockville, MD 20850, USA  
COMMENT On May 21, 2004 this sequence version replaced gi.47499967.  
This sequence is to be utilized as the reference strain for  
Bacillus anthracis research - all other sequences should be  
compared to this sequence.

 PT New oligonucleotides that hybridize specifically to a Bacillus anthracis  
 PT sequence, useful for detecting cutaneous and respiratory Bacillus anthracis  
 PT infections.  
 XX  
 PS Claim 1; SEQ ID NO 22; 61pp; English.  
 XX

CC The present invention relates to an oligonucleotide of 20-40 nucleotides  
CC that specifically hybridises to a sequence contained in a *Bacillus*  
CC anthracis target sequence. The methods and compositions of the present  
CC invention are useful for detecting the presence of *Bacillus anthracis*  
CC nucleic acid in a sample, in particular for detecting cutaneous and  
CC respiratory anthrax infections. Two synthetic genetic target sequences,  
CC derived from *paga* and *capB* gene sequences, were synthesized to provide  
CC known standards for testing oligonucleotides for detection of the genes  
CC carried by the plasmids *pXO1* and *pXO2*, without requiring handling of  
CC virulent *Bacillus anthracis*. The present sequence represents a *paga*  
CC target sequence.

PT New recombinant DNA construct comprising an expression vector and a DNA fragment including genes for wild or mutant type Protective Antigen, PT lethal Factor or Edema Factor, useful for preventing or treating anthrax infection.

PS Disclosure; Page 20; 42pp; English

CC The present invention relates to a recombinant DNA construct comprising  
CC an expression vector and a DNA fragment including genes for wild type or  
CC mutant type Protective Antigen (PA), Lethal Factor (LF) or Oedema Factor  
CC (EF) from *Bacillus anthracis* anthrax toxin. The recombinant DNA construct  
CC is useful for preparing a composition for preventing or treating anthrax  
CC infection, for example in a vaccine. The present sequence is a mutagenic  
CC primer used to create a mutant part of the anthrax toxin

XX New immunogenic reagent having a polypeptide of the full length

PT Protective Antigen of Bacillus anthracis, useful for treating B.

PT anthracis infection or in preparing a medicament for the prophylaxis or

PT treatment of the infection.

XX Example 5; Fig 3; 40pp; English.

XX The present invention relates to an immunogenic reagent, which produces

CC an immune response that is protective against Bacillus anthracis. The

CC reagent comprises one or more polypeptides which together represent up to

CC three domains of the full length Protective Antigen (PA) of Bacillus

CC anthracis or variants of these, and at least one of the domains comprises

CC domain 1 or domain 4 of PA or its variant. The invention is used as a

CC vaccine. The immunogenic reagent is useful in the preparation of a

CC medicament for the prophylaxis or treatment of B. anthracis infection.

CC The present sequence is Bacillus subtilis protective antigen domain 1b+2

XX New oligonucleotides that hybridize specifically to a Bacillus anthracis

PT sequence, useful for detecting cutaneous and respiratory Bacillus anthrax

PT infections.

XX Claim 21; SEQ ID NO 33; 61pp; English.

XX The present invention relates to an oligonucleotide of 20-40 nucleotides

CC that specifically hybridizes to a sequence contained in a Bacillus

CC anthracis target sequence. The methods and compositions of the present

CC invention are useful for detecting the presence of Bacillus anthracis

CC nucleic acid in a sample, in particular for detecting cutaneous and

CC respiratory anthrax infections. Two synthetic genetic target sequences,

CC derived from pagA and capB gene sequences, were synthesized to provide

CC known standards for testing oligonucleotides for detection of the genes

CC carried by the plasmids px01 and px02, without requiring handling of

CC virulent Bacillus anthracis. The present sequence represents a pagA

CC target sequence.

PT New non-pathogenic spore comprising an antigenic fragment of anthrax  
PT protective antigen, useful as an anthrax vaccine or for manufacturing an  
PT anthrax vaccine.  
XX  
XX Claim 5; SEQ ID NO 10; 90pp; English.  
XX  
XX The present invention relates to a non-pathogenic spore comprising an  
CC antigenic fragment of anthrax protective antigen. Also given is a  
CC pharmaceutical composition comprising a non-pathogenic spore comprising  
CC at least an antigenic fragment of anthrax protective antigen in  
CC association with a pharmaceutical carrier and/or excipient; and methods  
CC of inducing immunity to anthrax in a mammal susceptible to anthrax  
CC infection. The Bacillus species spore is a spore from many species such  
CC as Bacillus alvei; Bacillus baduui; Bacillus brevis and preferably a  
CC spore from Bacillus subtilis. The spore comprises an antigenic fragment  
CC of anthrax protective antigen in the form of a protein attached to the  
CC proteinaceous coat of the spore. It comprises an antigenic fragment of  
CC anthrax protective antigen encoded in the form of DNA which is adapted to  
CC be expressed when the spore germinates. The antigenic fragment is one or  
CC more of: PA83 which comprises a sequence of SEQ ID NO: 6; PA63 which  
CC comprises a sequence of SEQ ID NO: 7; Domain 1 of the protective antigen  
CC which has a sequence of SEQ ID NO: 1; Domain 2 of the protective antigen  
CC which has a sequence of SEQ ID NO: 2; Domain 3 of the protective antigen  
CC which has a sequence of SEQ ID NO: 3; Domain 4 (residues 595-735) of the  
CC protective antigen which has a sequence of SEQ ID NO: 4; and Domain D1b23  
CC which is a sequence of SEQ ID NO: 10. The composition further comprises  
CC an adjuvant that potentiates an antigen-specific immune response. The  
CC composition (including the spore) is useful as an anthrax vaccine or for  
CC manufacturing an anthrax vaccine. The composition and method are used for  
CC inducing an immune response against anthrax. The present sequence is DNA

PS Example 1; SEQ ID NO 47; 91pp; English.  
CC The specification describes a method for producing recombinant Bacillus  
CC anthracis protective antigen protein. The method comprises providing an  
CC expression vector having a polynucleotide encoding a Bacillus anthracis  
CC protective antigen protein which is codon-optimized for expression in  
CC yeast, transforming a yeast with the vector, fermenting the transformed  
CC yeast for the expression of the protein, and isolating the protein. The  
CC protective antigen protein is PA63 or PA63. The method of the invention  
CC is useful for the produce of antigen protein, which is used for  
CC prophylactic immunization against anthrax infections. The present  
CC sequence encodes a PA63 fragment.

PT Recombinant DNA construct useful as vaccines for anthrax, in producing  
PT host cells for analyzing the drugs and agents inhibiting anthrax.  
XX  
PS Disclosure; Page 35; 35pp; English.

```
XX CC The invention provides a recombinant DNA construct that comprises a
CC vector and at least one nucleic acid (or its fragment) encoding a
CC combination of Bacillus anthracis proteins, selected from protective
CC antigen (PA), MA-PA (PA with its secretory signals removed), rPA-PA (PA
CC with its secretory signals replaced with those of tissue plasminogen
CC activator) and PA63 (63 kDa PA). The construct is useful as a DNA vaccine
CC for anthrax and in producing infectious alpha virus particles. These
CC particles, expressing the B. anthracis proteins are useful also as
CC vaccines for anthrax. Host cells transformed with the construct are
CC useful for analyzing the effectiveness of drugs and agents that inhibit
CC anthrax or B. anthracis proteins. The present sequence represents a B.
CC anthracis PA63 protein encoding DNA

XX amount of a recombinant B. anthracis protective antigen protein and/or
XX lethal factor protein.
XX
XX Disclosure; SEQ ID NO 21; 143pp; English.
XX
XX The present invention relates to immunogenic compositions useful for
XX preparing a vaccine against a lethal infection of Bacillus anthracis in
```

```
CC an animal. The compositions comprise an immunising amount of a
CC recombinant B. anthracis protective antigen (rPA) protein and a
CC recombinant B. anthracis lethal factor (rLF) protein. The composition and
CC methods are useful in protecting against anthrax or lethal infections
CC caused by B. anthracis. The present sequence is pBP111 vector DNA for the
CC expression of Bacillus anthracis 64kDa N-terminal PA deletion mutant
CC (PA64). This sequence is used in the invention.

 XX Nucleic acid encoding anthrax toxin fusion protein - useful for  
 PT targeting toxin to specific cells, eg for killing tumour cells or HIV-  
 PT infected cells.  
 PT  
 XX Example 6; Page 111-113; 124pp; English.

The sequence encoding the protective antigen of *Bacillus anthracis* may be used in the construction of a nucleic acid which encodes a fusion protein comprising the anthrax protective antigen binding domain of the native anthrax lethal factor and a sequence encoding an actively inducing domain of a second protein. Such fusion proteins are useful for the specific killing of tumour cells or the killing of cells infected with intracellular pathogens, especially HIV, depending on the second component. The protective antigen and other toxins require proteolytic cleavage to acquire activity. Since some cells infected with an intracellular pathogen possess an active protease with quite a narrow substrate specificity e.g. HIV, the protease cleavage site found in the native toxin is replaced with an intracellular pathogen specific protease site (See AAR60184-88). The protease in cells that are infected with an intracellular pathogen cleaves the modified toxin which is then rendered active and kills the cell. This sequence encodes the *Bacillus anthracis* protective antigen but the nucleotides originally at positions 482-523

CC have been replaced with the cassette described in AAQ70186, resulting in  
 CC replacement in the corresponding protein of amino acids 162-171 with the  
 CC HIV protease cleavable sequence described in AAR60186. (Updated on 25-MAR  
 CC -2003 to correct FN field.)

 XX Producing recombinant *Bacillus anthracis* Protective Antigen protein  
 PT encoded by an expression vector having a nucleotide sequence being codon-  
 PT optimized for expression in yeast, useful for manufacturing anthrax  
 PT vaccines.  
 XX  
 XX Example 6; SEQ ID NO 53; 91pp; English.

The specification describes a method for producing recombinant *Bacillus anthracis* protective antigen protein. The method comprises providing an expression vector having a polynucleotide encoding a *Bacillus anthracis* protective antigen protein which is codon-optimized for expression in yeast, transforming a yeast with the vector, fermenting the transformed yeast for the expression of the protein, and isolating the protein. The protective antigen protein is PA63 or PA83. The method of the invention is useful for the production of antigen protein, which is used for prophylactic immunization against anthrax infections. The present sequence encodes a PA83 fragment.

XX New B moiety of pore-forming binary A-B toxin or its fragment, where the
PT moiety has a mutation that inhibits its pore-forming ability, useful for
PT preventing or treating bacterial infection, e.g. anthrax.
XX
XX Disclosure; SEQ ID NO 22; 129pp; English.
XX
XX The invention relates to a B moiety of pore-forming binary A-B toxin or
CC its fragment, where the moiety has a mutation that inhibits its pore-
CC forming ability and is selected from S382, N399, and N422 of the Bacillus
CC anthracis protective antigen (PA) appearing as ADM05483. Also included
CC are a vaccine composition comprising the mutant B moiety or its fragment
CC (and a carrier), preventing or treating a bacterial infection in a mammal
CC by administering the vaccine to the mammal, a nucleic acid encoding the
CC mutant B moiety, a vector comprising the nucleic acid and a purified
CC antibody that specifically binds a B moiety, but fails to bind a
CC naturally occurring B moiety. The B moiety is selected from Clostridium
CC difficile, C. perfringens, C. spiriforme, C. botulinum, and Bacillus
CC cereus. The mutation inhibits the pore-forming ability of the toxin in
CC vivo. The B moiety and vaccine composition are useful for preventing or
CC treating a bacterial infection, e.g. anthrax. The present sequence
CC encodes the wild-type PA protein.

PT protective antigen, useful as an anthrax vaccine or for manufacturing an
PT anthrax vaccine.
XX
XX Disclosure; SEQ ID NO 17; 90pp; English.
```

```
XX The present invention relates to a non-pathogenic spore comprising an
CC antigenic fragment of anthrax protective antigen. Also given is a
CC pharmaceutical composition comprising a non-pathogenic spore comprising
CC at least an antigenic fragment of anthrax protective antigen in
CC association with a pharmaceutical carrier and/or excipient, and methods
CC of inducing immunity to anthrax in a mammal susceptible to anthrax
CC infection. The Bacillus species spore is a spore from many species such
CC as Bacillus alvei; Bacillus badus; Bacillus brevis and preferably a
CC spore from Bacillus subtilis. The spore comprises an antigenic fragment
CC of anthrax protective antigen in the form of a protein attached to the
CC proteinaceous coat of the spore. It comprises an antigenic fragment of
CC anthrax protective antigen encoded in the form of DNA which is adapted to
CC be expressed when the spore germinates. The antigenic fragment is one or
CC more of: PA83 which comprises a sequence of SEQ ID NO: 6; PA63 which
CC comprises a sequence of SEQ ID NO: 7; Domain 1 of the protective antigen
CC which has a sequence of SEQ ID NO: 1; Domain 2 of the protective antigen
CC which has a sequence of SEQ ID NO: 2; Domain 3 of the protective antigen
CC which has a sequence of SEQ ID NO: 3; Domain 4 (residues 595-735) of the
CC protective antigen which has a sequence of SEQ ID NO: 4; and Domain D1b23
CC which is a sequence of SEQ ID NO: 10. The composition further comprises
CC an adjuvant that potentiates an antigen-specific immune response. The
CC composition (including the spore) is useful as an anthrax vaccine or for
CC manufacturing an anthrax vaccine. The composition and method are used for
CC inducing an immune response against anthrax. The present sequence is DNA
CC encoding anthrax protective antigen, PA83.

PT Recombinant DNA construct useful as vaccines for anthrax, in producing  
host cells for analyzing the drugs and agents inhibiting anthrax.

XX Diaclosure; Page 34; 35pp; English.

XX The invention provides a recombinant DNA construct that comprises a  
vector and at least one nucleic acid (or its fragment) encoding a  
combination of Bacillus anthracis proteins, selected from protective  
antigen (PA), MAT-PA (PA with its secretory signals removed), TPA-PA (PA  
with its secretory signals replaced with those of tissue plasminogen  
activator) and PA63 (63 kDa PA). The construct is useful as a DNA vaccine  
for anthrax and in producing infectious alpha virus particles. These  
particles, expressing the B. anthracis proteins are useful also as  
vaccines for anthrax. Host cells transformed with the construct are  
useful for analyzing the effectiveness of drugs and agents that inhibit  
anthrax or B. anthracis proteins. The present sequence represents a B.  
anthracis MAT-PA protein encoding DNA

XX New attenuated bacterium capable of expressing a heterologous protein,

XX which is under the control of a promoter, useful as a vaccine against

XX Bacillus anthracis infection, or for treating Bacillus anthracis

XX infection.

XX Claim 10; SEQ ID NO 9; 83pp; English.

XX The invention provides an attenuated bacterium which is capable of

XX expressing a heterologous protein. The expression of the heterologous

CC protein is under the control of a promoter selected from 8 fully defined

CC sequences ADV84827-ADV84834. The attenuated bacterium is preferably

CC *Salmonella typhi* or *Salmonella typhimurium*. The heterologous protein

CC comprises an antigenic sequence derived from a virus, bacterium, fungus,

CC yeast or parasite, and is especially a protective antigen (PA) of

CC *Bacillus anthracis*. A claimed live attenuated vaccine for immunization

CC against anthrax comprises an attenuated galactose epimerase-less mutant

CC strain of *S. typhi* (e.g. strain Ty21a) carrying a *Bacillus anthracis* PA,

CC especially a wild-type PA or its immunogenic fragment. The PA is

CC preferably encoded by a low-copy plasmid such as pGB2. The plasmid

CC promotes expression of the PA by a *htrB* promoter or by a *Sec* signal

CC sequence. The vaccine is used in a claimed method of immunizing a

CC susceptible host against *B. anthracis* disease. The present sequence is

CC the *B. anthracis* PA coding sequence (wild-type).

XX  
XX Novel Bacillus anthracis protective antigen having mutations conferring  
PT enhanced resistance to proteolytic degradation compared to wild type  
PT antigen, useful for inducing antibodies having neutralizing activity  
PT anthrax toxin.  
XX  
XX Example 5; SEQ ID NO 3; 30pp; English.

XX The invention describes a recombinant Bacillus anthracis protective  
CC antigen (PA), modified to incorporate one or more mutations comprising an  
CC amino acid deletion or substitution in a flexible, exposed, or loop  
CC segment of the PA protein, where the one or more mutations confers  
CC enhanced resistance to proteolytic degradation compared to wild type PA.  
CC A pharmaceutical composition (I) comprising PA and physiologically  
CC acceptable carrier or a composition (II) comprising a synthetic construct  
CC encoding PA and a carrier is useful for inducing serum antibodies that  
CC have neutralising activity for a B.anthraxis toxin which involves  
CC administering (I) to a mammal (human), sufficient to elicit production of  
CC the antibodies. The antibodies protect the mammal against the infection.  
CC (I) is useful for vaccinating a human against B.anthraxis infection. An  
CC anti-PA-antibody containing composition is useful for passively  
CC immunising a mammal against the toxic effect of B.anthraxis. PA is useful  
CC as vaccines to induce serum antibodies which are useful to prevent, treat  
CC or reduced the severity of infections caused by B.anthraxis, such as

CC inhalation anthrax, cutaneous anthrax and/or gastrointestinal anthrax. PA  
CC exhibits enhanced stability to proteolytic degradation that is increased  
CC by at least 25% compared to proteolytic stability of wild-type PA under  
CC comparable conditions. This sequence encodes an exemplary double  
CC protective antigen (PA) mutant comprising deletion of residues 162-167  
CC and residues 304-317 and substitutions S168I and S319G.

XX Protecting animal against lethal infection with Bacillus anthracis, by  
 PT administering wildtype or mutated form of Bacillus anthracis lethal  
 PT factor protein or its fragment or a nucleic acid encoding the mutated  
 PT protein.

XX Claim 25; Fig 2; 33pp; English.

XX This sequence encodes the B. anthracis protective antigen (PA). An  
 CC immunogenic fragment of PA, PCPA, can be used to produce an immune  
 CC response which protects an animal against lethal infection with Bacillus  
 CC anthracis. DNA encoding the B. anthracis PA can be used in conjunction  
 CC with DNA encoding the lethal factor (LF) in a DNA vaccine. Using a DNA  
 CC vaccine which encodes the mutated LF protein or fragment alone or in  
 CC combination with a DNA encoding the PA protein or its fragment, both  
 CC components (humoral and cell-mediated) of the immune system are  
 CC stimulated, which results in longer term immune memory response. The  
 CC combined use of a mutated LF and PA gene or their fragments results in a  
 CC higher level of immune response, as judged by overall serum antibody in  
 CC titers for LF and PA antigens, than the use of either LF or PA genes in  
 CC separate immunizations

XX
XX PS Claim 5; SEQ ID NO 16; 90pp; English.
XX
XX CC The present invention relates to a non-pathogenic spore comprising an
XX CC antigenic fragment of anthrax protective antigen. Also given is a
XX CC pharmaceutical composition comprising a non-pathogenic spore comprising
XX CC at least an antigenic fragment of anthrax protective antigen in
XX CC association with a pharmaceutical carrier and/or excipient; and methods
XX CC of inducing immunity to anthrax in a mammal susceptible to anthrax
XX CC infection. The Bacillus species spore is a spore from many species such
XX CC as Bacillus alvei; Bacillus baduus; Bacillus brevis and preferably a
XX CC spore from Bacillus subtilis. The spore comprises an antigenic fragment
XX CC of anthrax protective antigen in the form of a protein attached to the
XX CC proteinaceous coat of the spore. It comprises an antigenic fragment of
XX CC anthrax protective antigen encoded in the form of DNA which is adapted to
XX CC be expressed when the spore germinates. The antigenic fragment is one or
XX CC more of: PA83 which comprises a sequence of SEQ ID NO: 6; PA63 which
XX CC comprises a sequence of SEQ ID NO: 7; Domain 1 of the protective antigen
XX CC which has a sequence of SEQ ID NO: 1; Domain 2 of the protective antigen
XX CC which has a sequence of SEQ ID NO: 2; Domain 3 of the protective antigen
XX CC which has a sequence of SEQ ID NO: 3; Domain 4 (residues 595-735) of the
XX CC protective antigen which has a sequence of SEQ ID NO: 4; and Domain D1b23
XX CC which is a sequence of SEQ ID NO: 10. The composition further comprises
XX CC an adjuvant that potentiates an antigen-specific immune response. The
XX CC composition (including the spore) is useful as an anthrax vaccine or for
XX CC manufacturing an anthrax vaccine. The composition and method are used for
XX CC inducing an immune response against anthrax. The present sequence is DNA
XX CC encoding full length anthrax protective antigen, PA83.

XX
PT New polynucleotide vaccine composition comprising a nucleic acid sequence
PT that encodes a Bacillus anthracis antigen, useful for eliciting an immune
PT response against B. anthracis in a subject.
XX
PS Example 1; SEQ ID NO 3; 40pp; English.
XX
CC The invention relates to a polynucleotide vaccine composition comprising
CC a Bacillus anthracis antigen-encoding nucleic acid which is operatively
CC linked to a promoter for expression of the antigen in a mammalian cell.
CC The invention also relates to use of the vaccine composition of the
CC invention for eliciting an immune response in an individual. Preferably,
CC the antigen encoded by the polynucleotide vaccine is obtained or derived
CC from the Bacillus anthracis Protective Antigen (PA), a non-toxic factor
CC responsible for binding to cell membranes which is known to confer active
CC protection against anthrax. The encoded Bacillus anthracis antigen may
CC also be linked to a leader signal peptide (such as the tissue plasminogen
CC activator (TPA) signal peptide) which permits its secretion. The vaccine
CC composition may additionally comprise an adjuvant component such as a CpG
CC sequence, a nucleic acid encoding a polypeptide adjuvant, a lipid, a non-
CC protein hormone or a vitamin. The polynucleotide vaccine composition of
CC the invention can be administered directly into skin or muscle tissue,
CC preferably in particulate form, and is useful for inducing a protective
CC immune response against Bacillus anthracis infection. The present
CC sequence represents the complete nucleotide sequence encoding the
CC Bacillus anthracis Protective Antigen, used in the construction of a
CC Bacillus anthracis polynucleotide vaccine in an example of the invention.

XX
XX Identifying immunogenic peptides representative of a structural element
PT of a target protein comprising detecting an epitope corresponding to the
PT molecular model of the three dimensional structure of the epitope in the
PT target protein.
XX
XX Example 1; Page 106-108; Opp: English.
XX
XX The invention relates to identifying an immunogenic peptide
CC representative of a structural element of a target protein. The method
CC involves detecting in a molecular model of a chimeric polypeptide
CC comprising a selected epitope linked to a scaffold protein, an epitope
CC having a three dimensional conformation corresponding to the molecular
CC model of the three dimensional structure of the epitope in the target
CC protein. The methods of the invention are useful for identifying
CC immunogenic peptides of a target protein having a known three dimensional
CC structure, or of a target protein having a known amino acid sequence but
CC unknown three dimensional structure. The immunogenic peptides are useful
CC as vaccines for stimulating an immune response in a subject against
CC infectious microorganisms including protozoan (Entamoeba histolytica),
CC yeast (Candida albicans) or bacterium (Shigella flexneri, Yersinia
CC pestis, Serratia marcescens or Bacillus anthracis). The present sequence
CC represents a B. anthracis protective antigen (PA) DNA (Genbank Accession
CC No. 143380), where the antigen can be used as a target protein

PT New recombinant DNA construct comprising an expression vector and a DNA  
fragment including genes for wild or mutant type Protective Antigen,  
lethal factor or Edema Factor, useful for preventing or treating anthrax  
infection.

PS Disclosure; Page 20; 42pp; English.

CC The present invention relates to a recombinant DNA construct comprising  
an expression vector and a DNA fragment including genes for wild type or  
mutant type Protective Antigen (PA), lethal factor (LF) or Oedema Factor  
(EF) from Bacillus anthracis anthrax toxin. The recombinant DNA construct  
is useful for preparing a composition for preventing or treating anthrax  
infection, for example in a vaccine. The present sequence is a mutagenic  
primer used to create a mutant part of the anthrax toxin

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

; Sequence 1086311, Application US/10301480  
; Publication No. US20060057564A1

1 APPLICANT: Wang, David G.  
2 TITLE OF INVENTION: Identification and Mapping of Single Nucleotide Polymorphisms  
3  
4 TITLE OF INVENTION: In the Human Genome  
5  
6 FILE REFERENCE: 108827.137  
7  
8 CURRENT APPLICATION NUMBER: US/10/301,480

; CURRENT FILING DATE: 2002-11-21  
; PRIOR APPLICATION NUMBER: US 10/215,598  
; PRIOR FILING DATE: 2002-08-09  
; PRIOR APPLICATION NUMBER: US 60/311,695  
; PRIOR FILING DATE: 2001-08-10  
; NUMBER OF SEQ ID NOS: 122618  
; SOFTWARE: FastSeq for Windows Version 4.0  
; SEQ ID NO 498222  
; LENGTH: 544  
; TYPE: DNA  
; ORGANISM: Homo sapien  
US-10-301-480-498222

 When it has been determined, an EST from the other end of this  
 clone is listed in the 'Other ESTs on clone' field. Trace  
 considered overall poor quality This clone is available through:  
 Biogenetic Services, 801 32nd Ave. Brookings, SD 57006 USA (phone:  
 800 423 4163; email: info@biogeneticservices.com)

 /note="Vector: pSPORT1. Site 1: NotI. Site 2: SalI. This  
 cDNA library was constructed from mRNA isolated from  
 somatic embryos (age ranging from 2 months to 9 months)  
 cultured on MSD 20. The library was prepared using the  
 Life Technologies pSuperScript cDNA library construction  
 kit. Complementary DNA was synthesized from mRNA using a  
 poly (dT) sequence with a NotI restriction site. SalI  
 linkers adapters were ligated to the blunt-ended cDNA  
 fragments followed by NotI digestion. The cDNA fragments  
 were directionally cloned into the NotI-SalI restriction  
 site of the pSPORT1 vector. The ligated cDNA fragments  
 were transformed into E.coli Electromax DH10B host cells.  
 This library was constructed in the laboratory of Dr. Lila  
 Vodkin by Anu Khanna at the University of Illinois at  
 Urbana-Champaign. e-mail: l-vodkin@uiuc.edu"

/note="Organ: Embryo-Propag Region of Globular-Stage  
Embryos; Vector: triplex2; Site\_1: SfiI; Site\_2: SfiI;  
Embryo-propag regions were micro-dissected from  
globular-stage embryos six days after pollination from  
greenhouse-grown plants [Weterings et al., Plant Cell 13,  
2409-2425 (2001)]. Double-stranded cDNA was synthesized  
from embryo-propag mRNA using the SMART cDNA Library  
Construction Kit according to the manufacturer (Clontech).  
The embryo-propag cDNA fragments were directionally  
ligated into the SfiI restriction site of the lambda  
triplex2 vector (Clontech), and the recombinant cDNAs were  
transformed into E. coli XL1-Blue cells (Clontech).  
Embryo-propag cDNA plasmids used for directional  
sequencing were obtained by in vivo excision from the  
lambda triplex2 recombinants in E. coli BW25.8 cells  
(Clontech)."

      /sex="male and female"
      /dev_stage="Post natal day 5 to 13"
      /clone_1ib="Mouse Organ of Corti cDNA plunescrypt"
      /note="Organ: Organ of Corti; Vector: pBluescript; The
      organ of Corti (OC) was fine dissected from a total of 386
      OC as follows: 102 samples from post-natal (P) day 5; 72
      from P6; 60 from P7; 46 from P8; 18 from P9; 20 from P10;
      14 from P12 and 24 from P13. After killing animals by
      cervical dislocation followed by decapitation, the bulla
      was removed and opened in Leibowitz medium. The bony
      capsule of the cochlea was removed and the sensory
      epithelium was carefully dissected out of the modiolus.
      Total RNA was extracted using the micro Fasttrack kit
      (catalog # K1593-02; Invitrogen, Carlsbad, CA), according
      to manufacturer's instructions. Reverse transcription and
      library construction were carried out with the Uni-Zap XR
      vector kit (catalog # 237211, Stratagene) and Uni-Zap XR
      GigaPack III Gold Cloning kit (catalog # 237612), both
      from Stratagene (La Jolla, CA, USA), according to
      manufacturer's instructions. Briefly, 1.5 ug mRNA was
      reverse transcribed using a hybrid oligo(dT) linker-primer
      that contains an Xho I site. First strand synthesis was
      primed with the linker-primer and transcribed using
      Moloney murine leukemia virus reverse transcriptase
      (PMV-RT) and 5-methyl dCTP. The second strand was
      synthesized with DNA polymerase and RNase H. Complementary
      DNA was blunt ended with Pfu DNA polymerase, ligated with

```

BCor I adapters in the presence of ligase and digested with Xho I. The cDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-100 (Clontech, Palo Alto, CA) columns to enrich for cDNAs greater than 400bp and 1000 bp, respectively. The cDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with Bcor I and Xho I. The phagemid was packaged with Gigapak III Gold and, upon titration on XL1 Blue MRF<sup>+</sup> cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's ExAssist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200  $\mu$ l of saturated culture with the Concert96 (TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTs from the 5' end of the cDNA clones were generated with the universal M13 reverse primer (CAGGAACGCTAAGACC) and 25 $\times$  strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPs polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in Genbank and have known function; 23% have hits in Genbank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."

This sequence was derived from the PAPSP Schistosoma mansoni EST  
Genome Project. All sequences in the project were assembled and  
annotated. This entry and all the assembled sequences can be seen

in the following URL: <http://bioinfo.ig.usp.br/schisto/>  
 Plate: MA2-0018U-D291 row: 4 column: C.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

**TITLE** Direct Submission  
**JOURNAL** Submitted (25-NOV-2002) Motoaki Seki, RIKEN Genomic Sciences Center; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa 230-0045, Japan (E-mail: msek@gscc.riken.go.jp, URL: <http://pifweb.gsc.riken.go.jp>, Tel: 81-45-503-9625, Fax: 81-45-503-9586)  
**COMMENT** An Arabidopsis full-length cDNA library was constructed essentially as reported previously (Seki et al. (1998) Plant J. 15:707-720; Seki et al. (2002) Science 296:141-145). cDNA cleaved with BamHI and XhoI was ligated to modified lambda PUC-1-E vector (Garnini et al. (2001) Genome 77:79-90) digested with BamHI and SalI. This clone is in a modified pBluescript vector. Please visit our web site (<http://pifweb.gsc.riken.go.jp/>) for further details.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

PT Immunogenic composition for preparing a vaccine against a lethal  
PT infection of Bacillus anthracis in an animal, comprises an immunizing  
PT amount of a recombinant B. anthracis protective antigen protein and/or  
PT lethal factor protein.

PS Disclosure; SEQ ID NO 23; 143pp; English.

CC The present invention relates to immunogenic compositions useful for  
CC preparing a vaccine against a lethal infection of Bacillus anthracis in  
CC an animal. The compositions comprise an immunizing amount of a  
CC recombinant B. anthracis protective antigen (rPA) protein and a  
CC recombinant B. anthracis lethal factor (rLF) protein. The composition and  
CC methods are useful in protecting against anthrax or lethal infections  
CC caused by B. anthracis. The present sequence is pBP113 vector DNA for the  
CC expression of Bacillus anthracis 47 kDa N-terminal PA deletion mutant  
CC (PA47). This sequence is used in the invention.

XX
XX Claim 5; SEQ ID NO 10; 90pp; English.
XX
XX The present invention relates to a non-pathogenic spore comprising an
XX antigenic fragment of anthrax protective antigen. Also given is a
XX pharmaceutical composition comprising a non-pathogenic spore comprising
XX at least an antigenic fragment of anthrax protective antigen in
XX association with a pharmaceutical carrier and/or excipient; and methods
XX of inducing immunity to anthrax in a mammal susceptible to anthrax
XX infection. The Bacillus species spore is a spore from many species such
XX as Bacillus alvei; Bacillus badius; Bacillus brevis and preferably a
XX spore from Bacillus subtilis. The spore comprises an antigenic fragment
XX of anthrax protective antigen in the form of a protein attached to the
XX proteinaceous coat of the spore. It comprises an antigenic fragment of
XX anthrax protective antigen encoded in the form of DNA which is adapted to
XX be expressed when the spore germinates. The antigenic fragment is one or
XX more of: PA83 which comprises a sequence of SEQ ID NO: 6; PA63 which
XX comprises a sequence of SEQ ID NO: 7; Domain 1 of the protective antigen
XX which has a sequence of SEQ ID NO: 1; Domain 2 of the protective antigen
XX which has a sequence of SEQ ID NO: 2; Domain 3 of the protective antigen
XX which has a sequence of SEQ ID NO: 3; Domain 4 (residues 595-735) of the
XX protective antigen which has a sequence of SEQ ID NO: 4; and Domain D1b23
XX which is a sequence of SEQ ID NO: 10. The composition further comprises
XX an adjuvant that potentiates an antigen-specific immune response. The
XX composition (including the spore) is useful as an anthrax vaccine or for
XX manufacturing an anthrax vaccine. The composition and method are used for
XX inducing an immune response against anthrax. The present sequence is DNA
XX encoding anthrax protective antigen domain D1b23.

XX  
XX Disclosure; Page 35; 35pp; English.  
XX  
XX The invention provides a recombinant DNA construct that comprises a  
XX vector and at least one nucleic acid (or its fragment) encoding a  
XX combination of Bacillus anthracis proteins, selected from protective  
XX antigen (PA), MAT-PA (PA with its secretory signals removed), TPA-PA (PA  
XX with its secretory signals replaced with those of tissue plasminogen  
XX activator) and PA63 (63 kDa PA). The construct is useful as a DNA vaccine  
XX for anthrax and in producing infectious alpha virus particles. These  
XX particles, expressing the B. anthracis proteins are useful also as  
XX vaccines for anthrax. Host cells transformed with the construct are  
XX useful for analyzing the effectiveness of drugs and agents that inhibit  
XX anthrax or B. anthracis proteins. The present sequence represents a B.  
XX anthracis PA63 protein encoding DNA

XX moiety has a mutation that inhibits its pore-forming ability, useful for
XX preventing or treating bacterial infection, e.g. anthrax.
XX
XX Disclosure; SEQ ID NO 22; 129pp; English.
XX
XX The invention relates to a B moiety of pore-forming binary A-B toxin or
XX its fragment, where the moiety has a mutation that inhibits its pore-
XX forming ability and is selected from S382, N399, and N422 of the Bacillus
XX anthracis protective antigen (PA) appearing as ADM05483. Also included
XX are a vaccine composition comprising the mutant B moiety or its fragment
XX (and a carrier), preventing or treating a bacterial infection in a mammal
XX by administering the vaccine to the mammal, a nucleic acid encoding the
XX mutant B moiety, a vector comprising the nucleic acid and a purified
XX antibody that specifically binds a B moiety, but fails to bind a
XX naturally occurring B moiety. The B moiety is selected from Clostridium
XX difficile, C. perfringens, C. spiroforme, C. botulinum, and Bacillus
XX cereus. The mutation inhibits the pore-forming ability of the toxin in
XX vivo. The B moiety and vaccine composition are useful for preventing or
XX treating a bacterial infection, e.g. anthrax. The present sequence
XX encodes the wild-type PA protein.

 XX New non-pathogenic spore comprising an antigenic fragment of anthrax  
 PT protective antigen, useful as an anthrax vaccine or for manufacturing an  
 PT anthrax vaccine.  
 XX  
 PS Disclosure; SEQ ID NO 17; 90pp; English.  
 XX  
 CC The present invention relates to a non-pathogenic spore comprising an  
 CC antigenic fragment of anthrax protective antigen. Also given is a  
 CC pharmaceutical composition comprising a non-pathogenic spore comprising  
 CC at least an antigenic fragment of anthrax protective antigen in  
 CC association with a pharmaceutical carrier and/or excipient; and methods  
 CC of inducing immunity to anthrax in a mammal susceptible to anthrax  
 CC infection. The Bacillus species spore is a spore from many species such  
 CC as Bacillus alvei; Bacillus baduus; Bacillus brevis and preferably a  
 CC spore from Bacillus subtilis. The spore comprises an antigenic fragment  
 CC of anthrax protective antigen in the form of a protein attached to the  
 CC proteinaceous coat of the spore. It comprises an antigenic fragment of  
 CC anthrax protective antigen encoded in the form of DNA which is adapted to  
 CC be expressed when the spore germinates. The antigenic fragment is one or  
 CC more of: PA83 which comprises a sequence of SEQ ID NO: 6; PA63 which  
 CC comprises a sequence of SEQ ID NO: 7; Domain 1 of the protective antigen  
 CC which has a sequence of SEQ ID NO: 1; Domain 2 of the protective antigen  
 CC which has a sequence of SEQ ID NO: 2; Domain 3 of the protective antigen  
 CC which has a sequence of SEQ ID NO: 3; Domain 4 (residues 595-735) of the  
 CC protective antigen which has a sequence of SEQ ID NO: 4; and Domain D1b23  
 CC which is a sequence of SEQ ID NO: 10. The composition further comprises  
 CC an adjuvant that potentiates an antigen-specific immune response. The  
 CC composition (including the spore) is useful as an anthrax vaccine or for  
 CC manufacturing an anthrax vaccine. The composition and method are used for  
 CC inducing an immune response against anthrax. The present sequence is DNA  
 CC encoding anthrax protective antigen, PA83.

 XX Recombinant DNA construct useful as vaccines for anthrax, in producing  
 PT host cells for analyzing the drugs and agents inhibiting anthrax.  
 PT  
 XX  
 PS Disclosure; Page 34; 35pp; English.  
 XX  
 CC The invention provides a recombinant DNA construct that comprises a  
 CC vector and at least one nucleic acid (or its fragment) encoding a  
 CC combination of Bacillus anthracis proteins, selected from protective  
 CC antigen (PA), MAT-PA (PA with its secretory signals removed), TPA-PA (PA  
 CC with its secretory signals replaced with those of tissue plasminogen  
 CC activator) and PA63 (63 KDa PA). The construct is useful as a DNA vaccine  
 CC for anthrax and in producing infectious alpha virus particles. These  
 CC particles, expressing the B. anthracis proteins are useful also as  
 CC vaccines for anthrax. Host cells transformed with the construct are  
 CC useful for analyzing the effectiveness of drugs and agents that inhibit  
 CC anthrax or B. anthracis proteins. The present sequence represents a B.  
 CC anthracis MAT-PA protein encoding DNA

 PT New attenuated bacterium capable of expressing a heterologous protein,  
 PT which is under the control of a promoter, useful as a vaccine against  
 PT *Bacillus anthracis* infection, or for treating *Bacillus anthracis*  
 PT infection.  
 XX  
 PS Claim 10; SEQ ID NO 9; 83pp; English.  
 XX  
 CC The invention provides an attenuated bacterium which is capable of  
 CC expressing a heterologous protein. The expression of the heterologous  
 CC protein is under the control of a promoter selected from 8 fully defined  
 CC sequences ADV84827-ADV84834. The attenuated bacterium is preferably  
 CC *Salmonella typhi* or *Salmonella typhimurium*. The heterologous protein  
 CC comprises an antigenic sequence derived from a virus, bacterium, fungus,  
 CC yeast or parasite, and is especially a protective antigen (PA) of  
 CC *Bacillus anthracis*. A claimed live attenuated vaccine for immunization  
 CC against anthrax comprises an attenuated galactose epimerase-less mutant  
 CC strain of *S. typhi* (e.g. strain Ty21a) carrying a *Bacillus anthracis* PA,  
 CC especially a wild-type PA or its immunogenic fragment. The PA is  
 CC preferably encoded by a low-copy plasmid such as pGB2. The plasmid  
 CC promotes expression of the PA by a *nirB* promoter or by a *Sec* signal  
 CC sequence. The vaccine is used in a claimed method of immunizing a  
 CC susceptible host against *B. anthracis* disease. The present sequence is  
 CC the *B. anthracis* PA coding sequence (wild-type).

 PT Novel *Bacillus anthracis* protective antigen having mutations conferring  
 PT enhanced resistance to proteolytic degradation compared to wild type  
 PT antigen, useful for inducing antibodies having neutralizing activity  
 PT anthrax toxin.  
 XX  
 PS Example 5; SEQ ID NO 3; 30pp; English.  
 XX

CC The invention describes a recombinant *Bacillus anthracis* protective  
CC antigen (PA), modified to incorporate one or more mutations comprising an  
CC amino acid deletion or substitution in a flexible, exposed, or loop  
CC segment of the PA protein, where the one or more mutations confers  
CC enhanced resistance to proteolytic degradation compared to wild type PA.  
CC A pharmaceutical composition (i) comprising PA and physiologically  
CC acceptable carrier or a composition (ii) comprising a synthetic construct  
CC encoding PA and a carrier is useful for inducing serum antibodies that  
CC have neutralizing activity for a *B. anthracis* toxin which involves  
CC administering (i) to a mammal (human), sufficient to elicit production of  
CC the antibodies. The antibodies protect the mammal against the infection.  
CC (i) is useful for vaccinating a human against *B. anthracis* infection. An  
CC anti-PA-antibody containing composition is useful for passively  
CC immunizing a mammal against the toxic effect of *B. anthracis*. PA is useful  
CC as vaccines to induce serum antibodies which are useful to prevent, treat  
CC or reduced the severity of infections caused by *B. anthracis*, such as  
CC inhalation anthrax, cutaneous anthrax and/or gastrointestinal anthrax. PA  
CC exhibits enhanced stability to proteolytic degradation that is increased  
CC by at least 25% compared to proteolytic stability of wild-type PA under  
CC comparable conditions. This sequence encodes an exemplary double  
CC protective antigen (PA) mutant comprising deletion of residues 162-167  
CC and residues 304-317 and substitutions S168I and S319G.

XX Protecting animal against lethal infection with Bacillus anthracis, by  
PT administering wildtype or mutated form of Bacillus anthracis lethal  
PT factor protein or its fragment or a nucleic acid encoding the mutated  
PT protein.  
XX  
PS Claim 25; Fig 2; 33pp; English.  
XX  
XX This sequence encodes the B. anthracis protective antigen (PA). An  
CC immunogenic fragment of PA, PCPA, can be used to produce an immune  
CC response which protects an animal against lethal infection with Bacillus  
CC anthracis. DNA encoding the B. anthracis PA can be used in conjunction  
CC with DNA encoding the lethal factor (LF) in a DNA vaccine. Using a DNA  
CC vaccine which encodes the mutated LF protein or fragment alone or in  
CC combination with a DNA encoding the PA protein or its fragment, both  
CC components (humoral and cell-mediated) of the immune system are

CC stimulated, which results in longer term immune memory response. The  
CC combined use of a mutated LF and PA gene or their fragments results in a  
CC higher level of immune response, as judged by overall serum antibody  
CC titers for LF and PA antigens, than the use of either LF or PA genes in  
CC separate immunizations

XX Immunogenic conjugate, useful for inhibiting or treating infection and/or  
PT disease caused by Bacillus anthracis or other bacilli, comprises Bacillus  
PT capsular poly-gamma-glutamic acid polypeptide covalently linked to  
PT carrier.  
XX  
PS Disclosure; SEQ ID NO 2; 66pp; English.  
XX  
XX The invention relates to an immunogenic conjugate comprising a Bacillus  
CC capsular poly-gamma-glutamic acid (gammaPGA) polypeptide covalently  
CC linked to a carrier, where the conjugate elicits an immune response in a  
CC subject. Also included are a composition comprising the conjugate and a  
CC pharmaceutically acceptable carrier (for use in eliciting an immune  
CC response against Bacillus anthracis epitope, preferably Bacillus  
CC anthracis antigenic epitope in a subject) and an isolated antibody that  
CC binds to the Bacillus capsular gammaPGA polypeptide (that recognizes  
CC or that binds Bacillus anthracis capsular gammaPGA polypeptide,  
CC or that binds Bacillus anthracis capsular gammaPGA). The carrier may  
CC comprise recombinant B. anthracis protective antigen. The composition and  
CC conjugate are useful for eliciting an immune response against a Bacillus  
CC antigenic epitope in a subject and for inhibiting or treating infection

CC and/or disease caused by *B. anthracis* or other bacilli. The immune  
CC response comprises opsonophagocytic activity. The composition is useful  
CC for active immunization for preventing *B. anthracis* infections and for  
CC preparation of immune antibodies. The present sequence encodes Bacillus  
CC anthracis protective antigen, PA.

XX New non-pathogenic spore comprising an antigenic fragment of anthrax  
PT protective antigen, useful as an anthrax vaccine or for manufacturing an  
PT anthrax vaccine.  
XX  
PS Claim 5; SEQ ID NO 16; 90pp; English.  
XX  
XX The present invention relates to a non-pathogenic spore comprising an  
CC antigenic fragment of anthrax protective antigen. Also given is a  
CC pharmaceutical composition comprising a non-pathogenic spore comprising  
CC at least an antigenic fragment of anthrax protective antigen in  
CC association with a pharmaceutical carrier and/or excipient; and methods  
CC of inducing immunity to anthrax in a mammal susceptible to anthrax  
CC infection. The Bacillus species spore is a spore from many species such  
CC as Bacillus alvei; Bacillus baduus; Bacillus brevis and preferably a  
CC spore from Bacillus subtilis. The spore comprises an antigenic fragment  
CC of anthrax protective antigen in the form of a protein attached to the  
CC proteinaceous coat of the spore. It comprises an antigenic fragment of  
CC anthrax protective antigen encoded in the form of DNA which is adapted to  
CC be expressed when the spore germinates. The antigenic fragment is one or  
CC more of: PA83 which comprises a sequence of SEQ ID NO: 6; PA63 which  
CC comprises a sequence of SEQ ID NO: 7; Domain 1 of the protective antigen  
CC which has a sequence of SEQ ID NO: 1; Domain 2 of the protective antigen  
CC which has a sequence of SEQ ID NO: 2; Domain 3 of the protective antigen  
CC which has a sequence of SEQ ID NO: 3; Domain 4 (residues 595-735) of the  
CC protective antigen which has a sequence of SEQ ID NO: 4; and Domain D1b23  
CC which is a sequence of SEQ ID NO: 10. The composition further comprises  
CC an adjuvant that potentiates an antigen-specific immune response. The

CC composition (including the spore) is useful as an anthrax vaccine or for  
CC manufacturing an anthrax vaccine. The composition and method are used for  
CC inducing an immune response against anthrax. The present sequence is DNA  
CC encoding full length anthrax protective antigen, PA83.

 XX  
 XX New polynucleotide vaccine composition comprising a nucleic acid sequence  
 PT that encodes a Bacillus anthracis antigen, useful for eliciting an immune  
 PT response against B. anthracis in a subject.  
 XX  
 XX Example 1; SEQ ID NO 3; 40pp; English.  
 XX  
 XX The invention relates to a polynucleotide vaccine composition comprising  
 CC a Bacillus anthracis antigen-encoding nucleic acid which is operatively  
 CC linked to a promoter for expression of the antigen in a mammalian cell.  
 CC The invention also relates to use of the vaccine composition of the  
 CC invention for eliciting an immune response in an individual. Preferably,  
 CC the antigen encoded by the polynucleotide vaccine is obtained or derived  
 CC from the Bacillus anthracis Protective Antigen (PA), a non-toxic factor  
 CC responsible for binding to cell membranes which is known to confer active

CC protection against anthrax. The encoded Bacillus anthracis antigen may  
 CC also be linked to a leader signal peptide (such as the tissue plasminogen  
 CC activator (TPA) signal peptide) which permits its secretion. The vaccine  
 CC composition may additionally comprise an adjuvant component such as a CpG  
 CC sequence, a nucleic acid encoding a polypeptide adjuvant, a lipid, a non-  
 CC protein hormone or a vitamin. The polynucleotide vaccine composition of  
 CC the invention can be administered directly into skin or muscle tissue,  
 CC preferably in particulate form, and is useful for inducing a protective  
 CC immune response against Bacillus anthracis infection. The present  
 CC sequence represents the complete nucleotide sequence encoding the  
 CC Bacillus anthracis Protective Antigen, used in the construction of a  
 CC Bacillus anthracis polynucleotide vaccine in an example of the invention.

Identifying immunogenic peptides representative of a structural element  
PT of a target protein comprising detecting an epitope corresponding to the  
PT molecular model of the three dimensional structure of the epitope in the  
PT target protein.

Example 1; Page 106-108; 0pp; English.

The invention relates to identifying an immunogenic peptide  
CC representative of a structural element of a target protein. The method  
CC involves detecting in a molecular model of a chimeric polypeptide  
CC comprising a selected epitope linked to a scaffold protein, an epitope  
CC having a three dimensional conformation corresponding to the molecular  
CC model of the three dimensional structure of the epitope in the target  
CC protein. The method of the invention are useful for identifying  
CC immunogenic peptides of a target protein having a known three dimensional  
CC structure, or of a target protein having a known amino acid sequence but  
CC unknown three dimensional structure. The immunogenic peptides are useful  
CC as vaccines for stimulating an immune response in a subject against  
CC infectious microorganisms including protozoan (Entamoeba histolytica),  
CC yeast (Candida albicans) or bacterium (Shigella flexneri, Yersinia  
CC pestis, Serratia marcescens or Bacillus anthracis). The present sequence  
CC represents a B. anthracis protective antigen (PA) DNA (GenBank Accession  
CC No. 143280), where the antigen can be used as a target protein

PS Claim 5; SEQ ID NO 5; 61pp; English.  
XX  
CC The present invention relates to an oligonucleotide of 20-40 nucleotides

CC that specifically hybridizes to a sequence contained in a *Bacillus*  
CC *anthracis* target sequence. The methods and compositions of the present  
CC invention are useful for detecting the presence of *Bacillus anthracis*  
CC nucleic acid in a sample, in particular for detecting cutaneous and  
CC respiratory anthrax infections. Two synthetic genetic target sequences,  
CC derived from pagA and capB gene sequences, were synthesized to provide  
CC known standards for testing oligonucleotides for detection of the genes  
CC carried by the plasmids pX01 and pX02, without requiring handling of  
CC virulent *Bacillus anthracis*. The present sequence represents a pagA  
CC probe, used in the pX01 and pX02 detection kits.

PT Isolating nucleic acid from spore-forming bacteria e.g. Bacillus

PT anthracis, by culturing microbes in sporulation microbe-containing

PS physical crushing.

PS Disclosure; SEQ ID NO 6; 9pp; Japanese.

CC The present invention relates to a method for detecting a sporulation

CC microbe in a sporulation microbe-containing composition by isolating a

CC nucleic acid and amplifying the nucleic acid using specific PCR primers,

CC and primers for anthrax. Isolating a nucleic acid from a spore-forming

CC bacteria present in a sporulation microbe-containing composition,

CC comprises adding alcohol (70-90 weight % ethanol) to a sporulation

CC microbe-containing composition, culturing the sporulation microbes in the

CC composition and extracting nucleic acids from the culture by physical

CC crushing. The method is useful for isolating nucleic acid from spore-

CC forming bacteria in a sporulation microbe-containing composition, and for

CC detecting the sporulation microbe present in the composition. Preferably,

CC the method is useful for detecting and isolating a nucleic acid from

CC Bacillus anthracis, the causative agent of anthrax, in soil and food

CC stuffs. The method accurately detects the presence of sporulating

CC microbes present in a soil or food sample, and thus provides a sensitive

CC detection method for the toxic sporulating microbe e.g. B. anthracis. The

CC present invention.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.
